

What is the Plate Mate?

The Plate Mate is a globally patented system that makes it possible to place every type of plate or bowl up to five centimeters high. Whether the tableware is round, square, rectangular or oval; every plate fits. This system holds plates firm and secure and reduces the risk of rattling dishes to a minimum.

Easily adjustable

Adjusting the Plate Mate can be easily and quickly done. At top of each plate stacker, there are screwed adjusters which by turning alters the height between the red and black supports which then allows placement for different types of bowls or plates.

Space- and time saving

A large number of pre or part prepared plated meals can be placed easily and quickly onto a Plate Mate product which takes up a very small area in the kitchen. This makes it very easy to store food in the refrigerator or cold room. In addition Plate Mate has convenient covers that prevent dehydration and odor. The covers are also available in thermo edition. Serving from the Plate Mate saves time, which makes the work considerably more pleasant.

Maintenance

The Plate Mate is low maintenance and virtually indestructible. Cleaning it once in a while with a high pressure washer or a brush with soap solution is sufficient.

Warranty

All Plate Mate products have a one year of full warranty. (Requires proof of purchase)
